“Sick Building Syndrome” was a major national news story in the 1980/90s. While IAQ issues in commercial buildings never disappeared, pandemic concerns about air quality and worker health are back in the news, and the implications for property owners and organizations are massive. What strategies and technologies are being deployed in the COVID era to both purify the air, collect data, and communicate about it?

Our speakers will present some approaches and will invite an interactive discussion.
